Scientific document translation - page 1

本文档由 Scientific-Document-Translation 生成，https://github.com/example/Scientific-Document-Translation 项目仍在建设当中，欢迎 star 和关注。

科学文档保留公式与页面结构。本地验收使用真实的排版和翻译流程。

1. Scientific experiments compare a baseline method with a bounded resource policy. Every observation records the input, effective configuration and measured result. Repeated trials distinguish startup overhead from steady operation. Mathematical notation and paragraph order must survive translation, while output files retain their identity.

科学文档保留公式与页面结构。本地验收使用真实的排版和翻译流程。

2. Scientific experiments compare a baseline method with a bounded resource policy. Every observation records the input, effective configuration and measured result. Repeated trials distinguish startup overhead from steady operation. Mathematical notation and paragraph order must survive translation, while output files retain their identity.
